

Pop In Solutions Website Development Assessment

1. Assignment Title

Build a Professional Business Website for Pop In Solutions

2. Purpose of the Assignment

This assignment is designed to assess each student's practical ability to design, build, document, and present a professional website. The goal is to identify each student's strengths in the following areas:

- Frontend development
- UI/UX design
- Responsiveness
- Code structure
- Problem-solving
- Documentation
- Professional communication
- Attention to detail

3. Scenario

Pop In Solutions requires a modern company website that presents the business professionally to potential clients. The website must communicate the company's services, value proposition, and contact details clearly.

Students must build a working website and submit supporting documentation explaining their design and development choices.

4. Website Requirements

The website must include the following pages or sections:

4.1 Home Page

The home page must include:

- A professional hero section
- Pop In Solutions introduction
- Clear call-to-action button
- Short overview of services
- Why choose us section
- Basic contact prompt

4.2 About Us Page

This section must include:

- Company background
- Mission statement
- Vision statement
- Core values
- Short explanation of what makes Pop In Solutions different

4.3 Services Page

The services page must include at least five services, such as:

- Website development
- IT support
- Cybersecurity
- Cloud solutions
- Business systems
- Managed hosting
- Digital transformation consulting

Each service must include a short description.

4.4 Contact Page

The contact page must include:

- Contact form
- Name field
- Email field
- Phone number field
- Message field
- Submit button
- Company contact details
- Business location
- Social media placeholder links

The form does not need to send emails, but it must include basic validation.

4.5 Optional Bonus Section

Students may include one or more of the following:

- Testimonials
- FAQ section
- Pricing packages
- Blog/news section
- Live chat mock-up
- Newsletter sign-up
- Dark mode toggle

5. Technical Requirements

Students may use the following languages or frameworks: HTML, CSS, JavaScript, [React.js](#), [Next.js](#), Bootstrap, Tailwind CSS or any suitable frontend framework

The website must:

- Be responsive on desktop, tablet, and mobile
- Have a clean and professional design
- Use consistent colours, fonts, spacing, and layout
- Have working navigation
- Use meaningful file and folder structure
- Include comments where necessary
- Include form validation
- Load without major errors
- Avoid broken links and missing images

6. Code Requirements

Students must submit:

- Full source code
- A clear folder structure
- A README file
- Any assets used
- Screenshots of the final website
- Repo Links for where their website code resides

Code will be assessed on the following areas:

- Readability
- Naming conventions
- Reusability
- Indentation
- Component structure, if applicable
- Responsiveness
- Error handling
- Maintainability

7. Documentation Requirements

Students must submit a short project document containing:

7.1 Project Overview

Explain what website was built and its purpose.

7.2 Tools and Technologies Used

List all technologies used and explain why they were selected.

7.3 Design Explanation

Explain the colour choices, layout choices, navigation structure, and user experience approach.

7.4 Website Structure

Explain the pages or sections included in the website.

7.5 Challenges Faced

Explain any difficulties experienced and how they were solved.

7.6 Testing Performed

Include evidence of:

Desktop testing

Mobile testing

Form validation testing

Navigation testing

Browser testing

7.7 Future Improvements

Explain what could be added or improved if more time was available.

8. Submission Requirements

Each student must submit:

- Website source code
- README file
- Project documentation document
- Screenshots of the website
- A short presentation or demo

Submission format:

ZIP folder or GitHub repository link

9. Presentation Requirement

Each student must present their work for 5–10 minutes and explain:

- What they built
- Their design decisions
- Their code structure
- What challenges they faced
- What they would improve
- What they learned

10. Assessment Rubric

Area	Weight
Website functionality	20%
Design and user experience	20%
Responsiveness	15%
Code quality	20%
Documentation	15%
Presentation and explanation	10%
Total	100%

Documentation – 15%

- Clear project explanation
- Technologies explained
- Testing documented
- Challenges explained
- Future improvements included

Presentation – 10%

- Clear explanation
- Confidence in demo
- Ability to answer questions
- Understanding of own code
- Professional communication

12. Bonus Marks

Bonus marks may be awarded for:

- GitHub usage
- Deployment to Netlify, Vercel, or similar
- Dark mode
- Animations used professionally
- Accessibility considerations
- SEO basics
- Reusable components
- Good commit history
- Creative but professional design

13. Final Instruction to Students

This assignment is not only about making a website look good. It is also about showing that you can think like a developer, document your work professionally, test your own solution, and explain your decisions clearly.

Pop In Solutions will use this assessment to understand your current strengths and identify where you may fit best within future projects.

14. Existing Resources:

Students may use the existing Pop In Solutions website as inspiration and reference material:

Pop In Solutions Official Website: <https://popinsolutions.co.za>

Additional company information, branding material, and supporting content will be provided within the ZIP resource pack distributed via email. This pack will contain the core information required to plan, design, and develop the website.

Students should note that, in real-world development environments, clients may often provide only limited resources such as a business profile, logo, existing website, or brief requirements document. Part of this assessment is therefore intended to evaluate your ability to:

- Interpret client requirements
- Research and structure content appropriately
- Apply professional design thinking
- Make independent technical and creative decisions

Please also note that the official Pop In Solutions colour palette primarily consists of:

- Black
- White

Students are encouraged to maintain a clean, modern, and professional visual identity aligned with the Pop In Solutions brand.

Important Note

The student who achieves the highest overall assessment score may have their website selected and adopted as the official future website design for Pop In Solutions, subject to final review and possible refinements by the company.
