ABOUT US

We're a DevSecOps-driven IT solutions provider based in South Africa. We build, secure and support the digital infrastructure that schools, SMEs and professional services firms rely on every day.

Our Vision

The go-to partner for serious IT.

To build a future where innovation, trust, and excellence shape everything we create.

Our Mission

Practical technology that works.

To empower South African organisations with secure, automated and scalable technology solutions that improve efficiency, reduce risk and drive long-term growth.

COMPANY OVERVIEW AND STRATEGIC POSITION

Pop In Solutions (Pty) Ltd is a Bloemfontein based technology company established to address a persistent and growing challenge within South Africa's SME and institutional landscape: businesses are digitising, but not in a structured, secure, or operationally sustainable way. Many organisations operate with fragmented systems websites without ongoing support, hosting without resilience, communication tools without workflow structure, and software without integration. Pop In Solutions was founded specifically to resolve this fragmentation by delivering a unified, managed approach to digital operations.

The company operates as a managed technology services provider, offering a combination of IT support, hosting infrastructure, cybersecurity, workflow automation, and software development. Rather than positioning itself as a generalist or ad hoc service provider, Pop In Solutions has deliberately structured its offerings into defined packages and recurring service models. This approach reflects a level of commercial maturity that distinguishes the business from informal IT providers and freelance operators, and it aligns more closely with scalable, process-driven service delivery.

From a strategic standpoint, the company occupies a clearly defined position in the market. At one end are low-cost hosting providers and basic website developers that compete primarily on price but offer limited operational ownership. At the other end are large enterprise technology firms that provide extensive capability but are often cost-prohibitive or overly complex for regional SMEs and institutions. Pop In Solutions positions itself between these extremes, delivering structured, secure, and accessible solutions tailored to the practical needs of its target market.

BUSINESS MODEL AND COMMERCIAL STRUCTURE

A defining feature of Pop In Solutions is its transition away from purely time-and-material billing toward a package-based, subscription-driven model. This shift is not merely a pricing decision; it represents a fundamental operating philosophy. By productising its services into clearly defined packages, the company creates predictable revenue streams, simplifies client onboarding, and establishes a repeatable delivery model.

The company's commercial structure is built around multiple entry points. Clients may initially engage through once-off services such as website development or ad hoc technical support. However, the broader objective is to transition these relationships into recurring service agreements that include hosting, maintenance, managed support, and software subscriptions. This creates a layered customer journey in which entry-level services lead naturally into higher-value, long-term engagements.

This model is particularly effective in the SME market, where clients are often hesitant to commit to large upfront costs but are more receptive to manageable monthly service fees. By offering website rental options, managed hosting, and subscription-based software platforms, Pop In Solutions lowers the barrier to entry while building a stable and scalable revenue base.

SERVICE OFFERING AND PRODUCT ARCHITECTURE

Pop In Solutions delivers its services through an integrated portfolio that combines infrastructure, software, and support into a cohesive offering. The company's approach is not to sell isolated products, but to provide complete operational solutions.

At the infrastructure level, the company offers hosting and managed environments that prioritise reliability, performance, and security. These services go beyond traditional hosting by incorporating ongoing maintenance, monitoring, and accountability. The use of modern technologies, including security-focused solutions such as Cloudflare Tunnel, reflects a deliberate effort to reduce exposure to cyber threats and improve system resilience.

At the software level, Pop In Solutions has developed in-house platforms that form the backbone of its service delivery. PopIn-ITSM provides structured service management capabilities, enabling clients to track, manage, and resolve support requests through a formalised system. PopIn-RMS extends this capability into the hospitality and accommodation sector, offering operational tools tailored to the needs of that industry. These platforms represent more than functional tools; they are strategic assets that enhance customer retention, improve service consistency, and contribute to long-term business value.

At the service level, the company provides ongoing IT support, workflow automation, and digital advisory services. These offerings are designed to help clients move from reactive problem-solving to proactive and structured operations. By integrating support, software, and infrastructure, Pop In Solutions ensures that clients receive a seamless and accountable service experience.

PRODUCT CATALOGUE (COMMERCIAL OFFERING)

The company’s offerings are structured into standardised packages, enabling consistent delivery, scalability, and simplified client onboarding.

PopIn-ITSM (Service Management Platform)		
Package	Price	Description
Basic	R399 / user	Ticketing, basic workflows, user support
Business	R699 / user	Advanced workflows, reporting, automation
Enterprise	R1 199 / user	Full ITSM suite, integrations, governance

Key Features:

- Ticket management system
- Workflow automation (board-driven)
- Reporting & analytics
- Email integration
- Customer & agent portals

PRODUCT CATALOGUE (COMMERCIAL OFFERING)

PopIn-RMS (Resort Management System)		
Package	Price	Description
Basic	R399 / user	Ticketing, basic workflows, user support
Business	R699 / user	Advanced workflows, reporting, automation

Package	Price	Description
Labour & Support	R450 / hour	Ad hoc technical support
Block Hour Packages available	R450 / hour	Managed Technical support at a fixed recurring monthly cost

Key Features:

- Troubleshooting
- System maintenance
- Advisory & consulting
- Infrastructure support

PRODUCT CATALOGUE (COMMERCIAL OFFERING)

Website & Digital Presence Solutions		
Website Development		
Package	Price	Description
Labour & Support	R3 000 / page	The actual design and UI of your website
Hosting & Maintenance		
Package	Price	Description
Hosting + Maintenance	R1 899 / Month	
Basic Hosting	R299 / Month	
Website Rental Model (Key Differentiator)		
Package	3 Year (36 Months)	5 Year (60 Months)
Basic	R999 / Month	R749 / Month
Business	R1 499 / Month	R1 299 / Month
Enterprise	R 1 999 / Month	R1 799 / Month

PRODUCT CATALOGUE (COMMERCIAL OFFERING)

Website & Digital Presence Solutions (Continued)

Key Features:

- Fully managed website
- Hosting + maintenance
- Updates & security
- Continuous support

Strategic Benefit:

Removes large upfront costs → converts CAPEX into manageable OPEX.

Managed Hosting & Infrastructure

Pop In Solutions provides fully managed hosting environments, not commodity hosting.

Key Features:

- Performance monitoring
- Automated backups
- Security hardening
- Cloudflare Tunnel (no exposed IPs)
- High availability architecture

PRODUCT CATALOGUE (COMMERCIAL OFFERING)

Custom & Project-Based Services

Key Features:

- Website development
- System implementation
- Workflow automation setups
- CRM & ITSM deployments

Strategic Benefit:

Removes large upfront costs → converts CAPEX into manageable OPEX.

COMPLETED PROJECTS (TRACK RECORD)

Pop In Solutions has successfully delivered projects across multiple industries, demonstrating its ability to implement structured digital solutions.

Brebner Primary School

Scope:

- Ongoing managed services

Impact:

- Improved communication channels
- Improved Network Connectivity for the school.

Maselspoort Resort

Scope:

- PopIn-RMS deployment
- Website & system integration
- Managed hosting

Impact:

- Centralised booking and operations
- Improved operational visibility
- Reduced manual processes

Pop In Solutions has successfully delivered projects across multiple industries, demonstrating its ability to implement structured digital solutions.

AnnaPhysios (Pty) Ltd

Scope:

- Website hosting
- Managed services

Impact:

- Stable digital presence
- Ongoing technical support

TECHNOLOGY STRATEGY AND OPERATIONAL ADVANTAGE

A central element of Pop In Solutions' strategy is its commitment to in-house systems and reusable operational frameworks. This approach delivers several advantages. It reduces onboarding time, improves service consistency, and allows the company to scale without proportionally increasing costs.

The use of open-source and self-hosted technologies further enhances this advantage. By reducing reliance on expensive third-party software, the company maintains greater control over its cost structure and pricing flexibility. This is particularly important in a market where affordability remains a key factor in purchasing decisions.

Additionally, the company's security-first approach is embedded in its infrastructure design.

Rather than treating cybersecurity as an optional add-on, Pop In Solutions integrates security into its core service offering. This not only addresses a growing market concern but also strengthens the company's value proposition as a trusted technology partner.

CONCLUSION

Pop In Solutions (Pty) Ltd represents a practical and well-structured response to the evolving digital needs of South African businesses. By combining managed services, secure infrastructure, and proprietary software into a unified offering, the company addresses both the opportunities and risks associated with digital transformation.

Its strength lies not only in its technical capability, but in its ability to translate that capability into clear, accessible, and commercially viable solutions. With a strong foundation in package-based service delivery, a defined market position, and a commitment to both business growth and skills development, Pop In Solutions is well positioned to become a leading regional technology partner.
